

QPro Steamup

V21642 (Act 36 of 1947)

Product description

QPro Steamup is a formulated meal for steaming up dairy cows just before calving (pre-partum). This meal is formulated with anionic salts to acidify the cation:anion balance. It serves to condition the cow's body to mobilise minerals from her skeleton and to help prevent cows from getting hypocalcemia (milk fever) during calving.

Feed recommendation

It is important for cows to receive a balanced diet during this phase to prepare her for the calving process as well as for her milk production phase. Feed QPro Steamup together with maize and high-quality dry roughage. Intake will vary between breed and frame size. Feed a daily amount of 3-4 kg (Jersey type) or 4-5 kg (Holstein type) per day. Feed from 4 weeks before calving up until calving. Do not feed for longer than 4 weeks because the acidifying effect will be lost.
